Software Developer Engineer in Test

Detail-oriented Software Quality Test Engineer with 8+ years experience, specializing in automation and manual testing for internal and web-based applications. Proven ability to troubleshoot complex issues. Committed to delivering high-quality, defect-free software through meticulous testing and collaboration. Expert in implementing Agile methodologies.

Core Skills

Automation | Playwright | JavaScript | TypeScript | API Contract Tests | JSON Schema | Kubernetes | UI Automation | IntelliJ | JIRA | BitBucket | Bamboo | GraphQL | SQL | Linux | Postman | Node.js | Agile Methodologies | HashiCorp Vault | GitVersion | Testing Frameworks | Protractor | Geb | Spock | Protractor | Groovy | Geb | Postman | Maven | Selenium WebDriver | Docker |

Professional Work Experience

USANA HEALTH SCIENCES | Jan 2003 – Oct 2025

Software Developer Engineer in Test | Feb 2019 - Oct 2025

Architected and implemented enhancements to testing frameworks. Integrated GitVersion for consistent versioning. Led new automation for the untested promo-service and developed a Playwright suite for the packslip lifecycle, using techniques like GraphQL interception and fuzzy PDF text validation.

- Enhanced total automation tests by 50% by implementing new code into existing testing frameworks, focusing on standardization, re-usability, efficiency, and expanded test coverage for core micro-services.
- Reduced product defects by 80% through the development and execution of comprehensive automation test suites leveraging Protractor, Playwright, Groovy, Geb, Selenium WebDriver, Postman, JavaScript, TypeScript, JSON, and SQL.
- Saved several hours per week for the SDET team by introducing and configuring GitVersion, establishing an automated, consistent versioning standard that successfully eliminated manual reviews and version conflicts during pull requests and streamlined CI/CD processes.
- Eliminated 100% of manual regression testing time for a critical promo-service by creating a comprehensive automation test suite for the previously unautomated micro-service.
- Designed a highly reliable, end-to-end Playwright automation suite that reduced the manual packslip verification cycle time from 15 minutes to 30 seconds (order creation, generation, PDF verification), utilizing advanced techniques such as GraphQL response interception, file-system interactions, and fuzzy PDF text validation.
- Implemented and maintained 100+ automated tests, reducing manual testing time from 3 days to 15 minutes. Mentored junior testers, elevating team skill levels and performance.

Sr. Quality Engineer Jan 2017 - Feb 2019

Created and executed functional usability test cases using Jira, resulting in a consistent 98% pass rate.

Identified and documented defects, collaborating closely with developers and the Technical Product Owner to prioritize and resolve issues based on severity, ensuring high-quality software delivery.

- Managed functional usability test cases within Jira, consistently achieving a 98% pass rate and collaborating cross-functionally with developers and Product Owners to prioritize and resolve issues, ensuring high-quality software delivery.
- Created and executed test cases using JIRA, covering functional, usability, and performance aspects, resulting in a 98% test case pass rate.
- Designed and executed test plans, test cases, and regression suites, including defect reporting and exploratory testing.
- Took ownership of the full defect lifecycle from identification to resolution, reporting issues via Jira cards and collaborating closely with Developers and TPOs to ensure 100% of critical defects were tracked to closure.
- Authored critical technical documentation and procedural guides for core functions (e.g., Flyway configuration, customer onboarding, email system management), which improved operational efficiency by 25% and facilitated seamless knowledge transfer.

Customer Experience Lead Feb 2013 - Jan 2017

Led IT strategy to enhance the overall customer experience by collaborating with cross-functional teams to gather actionable feedback. Coordinated with vendors for effective survey deployment and process improvement, ultimately optimizing the feedback collection process and driving user-centric improvements across IT services.

- Increased customer satisfaction (CSAT) by 20% by leading the IT strategy to enhance customer experience, collaborating cross-functionally to gather actionable feedback and implement.
- Decreased customer complaints by 20% by implementing data-driven solutions that directly addressed issues identified via in-depth survey analytics.
- Reduced average survey deployment time from one week to 48 hours by optimizing vendor coordination and enhancing feedback collection processes.
- Partnered with call centers to streamline feedback capture, resulting in improved service quality.

Education

STEVENS HENAGER COLLEGE

Associate degree | Computer Science

Graduated with High Honors

Languages

English | Dutch (Speak, read and write)
